COGNITIVE DESIGN SYSTEMS

RELEASE NOTE: COGNITIVE DESIGN 1.3.0

Cognitive Design 1.3.0 has arrived, bringing exciting new features to make your design process smoother and more efficient. This release focuses on design optimization worfklows for performance thanks to the new simulation capabilities and enhanced file compatibility.

WHAT'S NEW?

1. Meshless FEA Static Simulation
We've integrated a brand-new Meshless FEA Static Simulation powered by Intact Solutions! Plugged to the Simulation-Driven Design (SDD) app, this feature enables faster design iterations and unlocks powerful new workflows, taking your design optimization to the next level.

2. STEP Export
Now you can export your results as .STEP files, ensuring greater flexibility and keeping your digital chain unbroken.

3. 3MF File Import
Start optimizing right away by importing your favorite .3MF files!

Minor Changes

- Renamed "AM Morpher" to "Manufacturing Driven Design (MDD): Reflecting its broader manufacturing capabilities.

- Renamed "Applications" Tab to "Templates": Making navigation more intuitive and aligning terminology with user workflows.

GET STARTED NOW

Update to Cognitive Design 1.3.0 today to experience these new features. For detailed information and support, visit our documentation. We're eager to hear your feedback as we continue to enhance Cognitive Design to meet your needs!
